

Product Carbon Footprint

Certification of your product's carbon footprint under the EPD Polska programme — what we issue and on what basis.

On what basis we certify

We certify under the **EPD Polska programme**, operated by Multicert as national programme operator. The carbon footprint is quantified to **ISO 14067:2018** (ISO 14040/44 life-cycle assessment) and independently verified to **ISO 14064-3**, following our published General Programme Instructions. Verification is independent of those who prepared the data.

EPD Polska programme

ISO 14067

ISO 14064-3

IPCC AR6 GWP100

What you receive

The certificate

Product Carbon Footprint certificate · CFP mark · entry in our public, QR-verifiable register.

In your buyer's format

Issued in the framework your customer reports under: ISO 14067 · GHG Protocol · PEF · EPD (EN 15804).

Two ways we work with you

A · Verification

You have the calculation; we verify it independently and issue the certificate.

B · Report & verification

We prepare the LCA and, by separated teams for impartiality, verify it and issue the certificate.

How we verify

1 Application & scoping — product class & PCR defined.

2 Data collection — primary production data.

3 Internal review & draft — to programme rules.

4 Independent external verification — ISO 14064-3. Preparer ≠ verifier.

5 Publication — registered, QR-verifiable.

6 Monitoring & update — re-verification on change.

Status & scope. Voluntary certification under the EPD Polska programme (ISO 14067 / ISO 14064-3), with independent verification. This is the documented methodological basis on which certificates are issued — not a claim of national

accreditation or of a specific country's mandatory scheme. Full General Programme Instructions available at epdportal.org/programme-rules.
